

How to Use the Cabin Lights

The Passport can defeat the darkness with interior lights, map lights and cargo-area lights. Here's how they work:

Interior Lights

How the interior lights activate depends on the position of the light switch in the overhead console:

Door-activated - In this position, the interior lights come on whenever any door or the tailgate is opened, the driver's door is unlocked, or the power mode is set to VEHICLE OFF

OFF - When OFF is selected, the interior lights remain off regardless of any other actions

ON - Select ON and the interior lights will come on regardless of door or tailgate status

Map Lights

How you turn on the map lights depends on whether you're in the front or rear seats:

Front Seats - Press the button for either the driver-side or passenger-side map light

Rear Seats - Press the lens of the map light on either side of the rear seat

Cargo-Area Lights

The cargo-area lights are activated automatically whenever the tailgate is opened

See your vehicle's Owner's Manual for even more details. You can download one at mygarage.honda.com.
