

# How to Use the Elevation & Compass Display

This feature uses information from GPS satellites to display the vehicle's heading, elevation and elevation history. There are two ways to show the display:

## Method 1: Engage Trail Mode

Use the drive mode switch to select **TRAIL**. The elevation and compass display will automatically appear.

## Method 2: Select the Display Manually

Roll the selector wheel on the left side of the steering wheel to **Elevation and Compass** and push in to select it.
